1.10 **Why Road Development Corporation?**

- UP PWD owns around 87 State Highways and 200 Major District Roads out of which 42 State Highways and 40 MDRs are of length 50 Km. or more. Due to constrained financial resources, State has not been able to cater the expectations to meet the National and International standards regarding their level of service.
- Road projects are delayed due to financial constraints, causing consequential loss to socio-economic development of the State.
- State is unable to attract financing from Public, Institutions and International agencies in order to develop mechanism to cater the needs of development of road sector.
- There is no integrated planning by all Infrastructure/ Road development agencies to understand the adverse environmental impacts, which are being generated due to massive scale of mining, excavation and exploitation of petroleum products in road construction.

While the advanced countries have moved ahead to save energy by using innovative technologies, which are eco-friendly, consume less energy, thus create lesser carbon footprints and earn lots of carbon credits.
- Road sector in the State is lacking in adopting innovative technologies which could provide sustainable, energy efficient and safer solutions at lower costs.

- Prime objective of the Corporation is creation of a self-sustainable model to attract financing from Public, Institutions and International agencies for developing green projects involving environment friendly innovative technologies including state of the art road side amenities to create safer road network in the State of Uttar Pradesh .
- Developing Green/Efficient Highways constructed as per innovative roadway design that integrates transportation functionality and ecological sustainability that will benefit transportation, the ecosystem, urban growth, public health and surrounding communities thereby reducing carbon footprints substantially.
- Developing permeable pavement system to make roads more environment friendly by conserving the storm water and making the roads resistant to damages caused by improper drainage.

- With depletion of natural resources at a very fast rate, and due to pressing need to switch over towards more sustainable resource, explore possibilities of usage of Eco-friendly Artificial Aggregates, made up of various kinds of industrial waste like fly ash, blast furnace slag, marble sludge, cement kiln dust etc which are otherwise pollutants of environment.
